

Amendments to the Specification:

Please amend the paragraph beginning on page 1, at line 1 as shown below:

The invention concerns a holder for a data carrier, consisting of at least one bottom side and one topside, with between those two a lift up space, and fitted with sides, which connects the topside and the bottom side. A holder like this is in general known and being used for putting away for example a disc form data carrier, like a ~~cd or a dvd~~, CD or DVD, as also like for magnetic data carrier, like a tape.

Please amend the paragraph beginning on page 1, at line 10 as shown below:

Such holders can sometimes be piled up or placed in a rack in a pile above each other held up together. From the piled up holders there only can be seen one side, ~~[[de]]~~ the top- and bottom side are covered up with the ~~[[on]]~~ top and underneath placed holders. The visible side is provided ~~[[of]]~~ with information which is concerning the data carrier which can be put inside. A purpose of the invention is to make the side better visible. In a few cases the side is provided of information which will be better visible by this way.

CF

Please amend the paragraph beginning on page 1, at line ³⁵~~17~~ as shown below:

It is positive when the connection made ~~through~~ through the side between top- and bottom side is at least partial spherical in cross-section. Because of the spherical form the connecting side between the top- and bottom side will be longer. The side is not the shortest connecting line between top- and bottom side. Because of that more information can be shown. The side is for example spherical or has a spherical part.
